Open Letter to Cardiff University in Response to its Plans for the Future of Mathematics

We, the undersigned, call on Cardiff University to reverse its plans to impose compulsory redundancies on its staff in the School of Mathematics.

The University proposes to merge the School of Mathematics and the School of Computer Science to create a new School of Data Science, Mathematics and Computing. The proposed School will have three departments: Data Science and AI, Computer Science, and Mathematics. All academic staff in the new Department of Mathematics have been threatened with compulsory redundancy, with the aim of reducing staff numbers from 30 to 15-20. Furthermore, plans are in place to significantly reduce the student intake to the Cardiff University mathematics degree programmes.

These proposals will cause long-lasting damage to Cardiff University, a leading research university in Wales. In particular:

- The undergraduate programmes in mathematics at Cardiff University currently meet their intake targets, and the School of Mathematics returns a significant budget surplus to the University. Cutting a profitable income source in a cost-effective subject area does not make financial sense when there are major budget pressures elsewhere in the institution.
- Mathematics is the foundation and fuel of AI (and other current disruptive technologies). Separating mathematical scientists in the proposed new structure is a short-sighted move that will put Cardiff on the back foot in this rapidly developing field.
- The proposed reduction in staff in the newly formed Department of Mathematics is so significant that it endangers the sustainability of its undergraduate programmes in the subject. This looks like the beginning of the end of pure and applied mathematics research and teaching at Cardiff.
- The number of mathematics programmes offered by Welsh universities has dropped significantly in recent years. Cardiff University has a key role in safeguarding the pipeline of talent into STEM subjects. There is a major shortage of mathematics teachers in Welsh schools, and Cardiff has a unique opportunity to expand its teacher training programme, in both languages, within its existing mathematics degrees.
- The threat of compulsory redundancies at a highly respected and research-active mathematics department has caused shock and disbelief in the international scientific community. These plans will cause long-lasting damage to the reputation of Cardiff University and risk a drop in its UK and global league table positions. The institution will lose its top researchers first and struggle to attract the brightest talent in the future.
- The scale of planned redundancies at a Russell Group university will furthermore have significant negative impact on the wider higher education sector, and limit the sector's ability to attract the best international researchers to work and live in the UK.

Senior members of the UK mathematics community have offered their support in finding alternatives to the proposed compulsory redundancies. We urge the University's senior

leadership team to work with them and create a more sustainable vision for the mathematical sciences at Cardiff.
